

INTRO

AGDev is the largest, most reputable and longest established property development company on the island of Kefalonia, Greece with 19 years of operations in the high-end property sector. Over 150 homes of superb design and quality of construction have already been completed establishing AGDev as the Leading Property Developer on the island. The success of AGDev is based on the need for the preservation of Ionian architecture and the high quality of construction.

AGDev can assist anyone looking for a holiday home, retirement home or a sound investment and can undertake the development of the most extensive range of properties such as apartments; commercial buildings and luxury villas. AG Dev. undertakes private and commercial development specialising in the construction of luxury villas and apartments to client's specification. We offer a broad range of engineering, management, and construction services. Our buildings feature top class materials and workmanship yet are competitively priced. Real estate, planning, design, construction and management services are offered as a complete "Turn-Key" service package. We have been following a "Complete Service Package" approach since 1988.

"AGDev is the largest, most reputable and longest established property development company on the island of Kefalonia"

The company's core concept since 1988 is to provide a single source for design and construction and to do so we employ more than 30 highly qualified engineers and technicians and we have also partnered with architectural and engineering firms. The design build partnership helps us respond to changes within the construction industry.

From the very beginning of the design-build process, the emphasis is on developing a partnership between the client and our team. During the pre-design and project planning stages, every effort is made to create and maintain strong channels of communication and to clearly present the advantages and disadvantages of various design alternatives.

Our team views this knowledge-based development as critical in allowing the client to participate in the design and building process. Working with the client to confirm costs and time scheduling targets means fewer delays and no final surprises. No matter what size of project, our staff of professionals will provide single source responsibility through all phases of construction. We can supply a comprehensive total service package ranging from site selection to final occupancy.

“From the very beginning of the design-build process, the emphasis is on developing a partnership between the client and our team”
